

Product Specifications

Product Name: Be used pipe of PVC pro-environment stabilizers

Product Aspect: white or yellowish powder

Product Model: RT-800B

Product Features:

- 1、The pro-environment stabilizers choose heterocyclic organic compounds as core materials. It own high heat resistance and good weathering performance, to ensure that the product has good early color and long-term stability and excellent resistance to weathering.
- 2、The pro-environment stabilizers can be used with lead and organic tin but without **cross contamination**
- 3、The pro-environment stabilizers own high efficiency ,low **dosage and high cost performance..**
- 4、The pro-environment stabilizers with **excellent processing performance, processing speed, and gift the products with bright surface**
5. RT800B has **wide universality due to less lubricant inside so customers can adjust the slip agent according to the specifications of the pipe**

Product Usage:

The pro-environment stabilizers are used for pipe. According to the product specifications and machine condition should be appropriately regulated lubricant, suggesting to add external lubricant and use less sliding agent.

Dosage: The pro-environment stabilizers use volume from 2.5 to 3.5 per 100 PVC

Standard:

According to the third party international specification, the product conforms EN71-3, RoHS, PAHs(18 items), Phthalates(21 kinds), PFOS/PFOA, NP, BPA, REACH-SVHC.

Product Storing:

Advice to put the product in dry and draft chamber. Please using up once package opened

Product Packaging: 25Kg/Package
